

Virtual CISO

Prevention is always better than a breach.

Security Confidence

- Compliance Management
- Leverage Security Technology to Enhance Operations
- Drive Security Roadmap Objectives
- Improve Security Posture
- Operationalize Security
- Maintain Reputation
- Continuous Monitoring
- Reduce Risk of Business Disruption

Challenge

Businesses face a risky combination of mounting security threats of increasing subtlety and a widening skills gap required to identify and combat cyber threats.

Knowing how to lead the charge in identifying and analyzing threats, creating strategic security plans, and ensuring compliance, requires specialized cyber expertise.

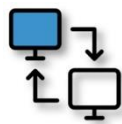

Many businesses, especially small and medium sized businesses, simply don't have enterprise-scale cyber security expertise on staff.

Research firm ESG indicates the cybersecurity skills shortage is getting consistently worse since 2014. In 2018, 51% of respondents claimed their organization had a problematic shortage of cybersecurity skills.

Enter the Virtual CISO

Perhaps it's time to consider a less traditional approach. There are many reasons to consider a Virtual CISO. If your organization needs cyber expertise but does not have the resources for a full time cyber subject matter expert; if you need someone on an interim basis; or, if you have a critical time sensitive issue to resolve, then a Virtual CISO could be the answer.

LP3 offers flexibility. You can set up a monthly retainer for a certain number of hours, bring in a V-CISO on a project basis, or procure a block of hours and use them as needed. V-CISO is a way of getting the best enterprise-scale cyber security talent available for just a fraction of the cost of hiring another expensive executive.

SOLUTIONS

Insight and Guidance. Security Success.

Contracting a Virtual CISO is far more cost effective than hiring a full time executive. LP3 can fill in where you need cyber help the most; helping your CEO and CIO pull together security policies, guidelines, standards, or dealing with complex technical cyber issues. V-CISO work can cover DFARS, NYSDFS, HIPAA/HITECH, GDPR, PCI, NIST, or NERC compliance. The V-CISO can help you manage business associate vendor risk assessments. Our qualified V-CISO's are certified and fully up to speed on the latest industry best practices. They have large enterprise-scale experience dealing with wide variety of scenarios and are well-placed to train your internal security staff.

- Reduce risk by identifying quick wins and areas of improvement
- Improve the overall security posture of the organization
- Support information security objectives of the organization
- Represent information security on executive, operations, audit and risk related activities
- Support in developing, evaluating, recommending, selecting and implementing controls

Our V-CISO program includes immediate discounted access to any service LP3 offers:

- Information security leadership and guidance support
- Information security technology solutions support
- Steering committee leadership or participation
