

OaaS for Education: Protect People on Campus

Challenges Today:

You have no way to identify an active shooter in advance—before an attack starts.

Online criminals impersonate your key executives to mine contacts for phishing attacks. You have no way to detect cyber bullying which could lead to workplace violence.

Mission Impacting Outcomes:

ALERTS when precursor active shooter language or graphics are detected online in your area—in time to prevent an attack from starting.

Prevent workplace violence or suicides driven by cyber bullying.

OaaS quickly takes down a fake accounts damaging your organization's reputation.

OaaS takes down an impostor executive LinkedIn account attempting to harvest key employee contact information for cyber attacks later.

Solution:

You can protect your organization's physical safety record, reputation, and executive personas online. Identify cyber bullying early in time to intervene. You can leverage OaaS today to quickly terminate imposter accounts, identify stolen digital assets on the dark web, and restore malicious modifications to campus online digital assets.

Current Operational Deployments:

OaaS service components are in use across DoD, IC, and in commercial environments for mission planning and battlefield force protection—understanding the digital environment around them.

Companies use OaaS components for facility, executive, and employee protection.
