

OaaS for Public Safety: Active Shooter Precursor Alerts, Cyber Bullying Notification, Asset and Event Protection

Challenges Today:

You cannot anticipate active shooters in advance; very little visibility into digital clues indicating attack preparation.

You get no warning until an explosion occurs at a major public event.

Mission Impacting Outcomes:

Identify and mitigate active shooters in advance before they attack saving lives.

Identify cyber bullying early intervening to prevent suicides.

Provide tactical alerts on a malicious individual or group planning to disrupt a public event.

ALERTS when weapons are detected in photos or video streams—advance warning for public event protection and response.

Solution:

You can leverage OaaS today creating timely, relevant, shareable and actionable information.

You can identify potential active shooters with strong negative sentiment through digital exhaust queues and intent alerts—online threats.

You can identify possible cyber bullying threats and victims before a situation escalates.

You can monitor a public event area or facility for threats

Current Operational Deployments:

OaaS service components are in use across DoD, IC, and in commercial environments for mission planning and battlefield force protection.

Companies use OaaS components for facility, executive, and employee protection.
